WAN IP Address: 07.711.105.226

Static NAT/DMZ

The screenshot shows the Vodafone Connect router settings page. The 'Expert Mode' dropdown menu is highlighted with a red box and a circled '1'. The 'Internet' tab is highlighted with a red box and a circled '2'. The 'Static NAT/DMZ' option in the side menu is highlighted with a red box and a circled '3'. The 'Exposed Host Function' toggle switch is highlighted with a red box and a circled '4'. The page title is 'Static NAT/DMZ/Exposed Host'. A warning message states: 'Warning: By using the Exposed Host function, you're bypassing the Vodafone Connect's firewall. Please make sure that your device is protected against attacks from the internet. The following Ports will not be forwarded: 7547,8088.' Below the warning, there is a section for 'Exposed Host Function' with a 'Public IP Address' field showing '90.240.111.111' and a 'Local IP Address' field with a numeric keypad. At the bottom, there are 'Apply' and 'Cancel' buttons.

The Static NAT/DMZ function can be found in the following location in your router settings page:

- 1 Change the dropdown menu to 'Expert Mode'
- 2 Click on the 'Internet' tab
- 3 Select 'Static NAT/DMZ' from the side menu
- 4 Enable the 'Exposed Host Function'

Static NAT/DMZ

Static NAT/DMZ/Exposed Host

If you have a local network device that can't run an internet application properly behind the firewall, you can allow unrestricted internet access to the network device (Exposed Host).

Exposed Host Function

Apply

Cancel

By default static NAT is disabled

Once this has been set against the device of choosing, it will be exposed completely. You can always turn the router firewall off as well if you wish.

Static NAT/DMZ/Exposed Host

If you have a local network device that can't run an internet application properly behind the firewall, you can allow unrestricted internet access to the network device (Exposed Host).

Exposed Host Function

Warning: By using the Exposed Host function, you're bypassing the Vodafone Connect router's firewall. Please make sure that your device is protected against attacks from the internet. The following Ports will not be forwarded:

Choose the local IP address that should be exposed to the internet. Additionally you should configure this IP Address as a static DHCP address for your device (see Settings/Network).

Public IP Address

0.0.0.0

Local IP Address

0 - 0 - 0 - 0
