

# IT Transformation Assessment Workshop

Make yours a Ready Business

**Vodafone**  
Power to you

## Moving to the cloud and managing the data explosion

IT is more complex than ever and new markets, technologies and competition present unprecedented opportunities to become a Ready Business.

Technology is changing so fast that many organisations' IT struggles to keep pace with a rapidly changing marketplace and business demands.

With Vodafone, your IT infrastructure can support and drive your Ready Business: helping you reduce risk, meet your compliance obligations and keep your critical data safe, with a cloud platform that's resilient, reliable, efficient and secure.

### Help me with my cloud strategy

The Vodafone IT Transformation Assessment Workshop shows you what your business needs to deliver IT as a Service (ITaaS) and how you could benefit from public and private cloud services.

A light touch, high level review, our IT Transformation Assessment Workshop starts with a self-assessment questionnaire, followed by a half-day workshop. The workshop helps you identify your current gaps, provides a benchmark comparison with your business sector and peers, and recommends the next steps for your IT strategy.

### Key features

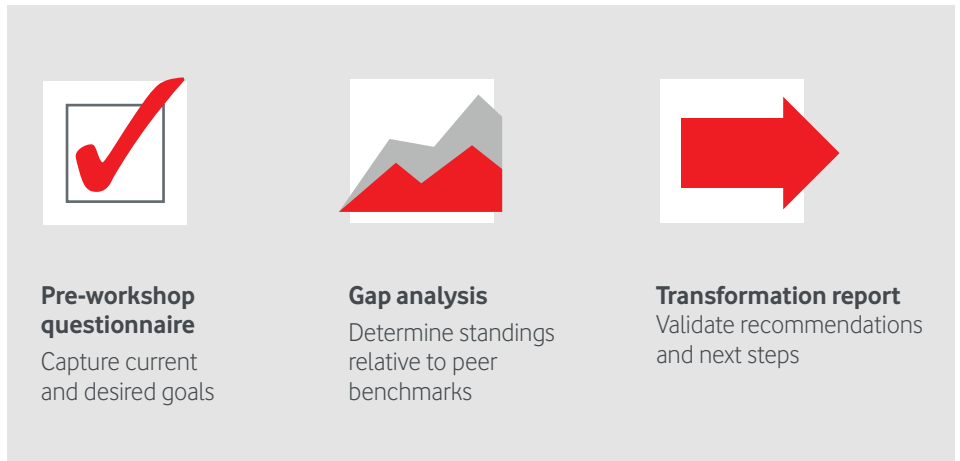

- Identifies your current IT position and the key requirements to deliver IT as a Service (ITaaS).
- Compares your state of cloud readiness with your peers and other organisations.
- Helps you understand your IT transformation strategy and identify gaps and priorities.
- Validates your objectives and priorities, and recommends the next steps.
- Develop a high level plan tailored to your organisation.
- Incorporates insights from other organisations using benchmark data.
- Provides an executive report to summarise the results and build a case for change.

## How does it work?

A pre-workshop questionnaire assesses your current state and key business goals, covering IT Service Strategy, Infrastructure, Operating Model and Applications. We analyse the results, then during a half-day workshop, our team works with your key IT executives to:

- review the results of the questionnaire
- validate your requirements
- discuss the gaps and identify priorities.

Our final transformation report will summarise the results and agree priorities.

## Who should attend?

Senior IT executives from the applications, operations and infrastructure areas along with internal line of business executives.

## Key benefits

- Understand key requirements to deliver IT as a Service (ITaaS).
- Realise your transformation future state and identify gaps and priorities.
- Validate your objectives and develop recommendations for next steps.
- Develop a high level plan tailored to your organisation.
- Leverage insights from other organisations using benchmark data.
- Compares how you fit with your peers and other organisations on cloud readiness.
- An executive report to summarise the results and priorities from which to further build a case for change.

## How do I contribute?

Simply complete the questionnaire and return it to us two weeks before the workshop. When you attend the workshop, bring your current two-year IT strategic plan, and details of your existing and planned architecture, investment plan and services catalogue for discussion.

## Award winning cloud and hosting expertise

Vodafone is the world's leading total communications provider and offers organisations secure, flexible and award winning cloud and hosting services. Through Vodafone Cloud & Hosting, we have the expertise to understand an organisation's unique IT needs and identify opportunities for improving performance and reducing costs. We help you move to the cloud, transform the way they operate, and leave complexity and unnecessary costs behind.
