

Film 2 (Read it later on iPhone and Sudokugrab on iPhone)

Opening:

- Hi I'm Jamie and I'm going to show you two great apps for your iPhone

Middle:

- If you've ever seen something online that you don't quite have time to read, you'll know that it would be really useful to press a button and have it appear in the Read it later app on your iPhone, and then you can read it later at your leisure perhaps on the tube or on the train.
 - With the Read it later app you can save pages from Safari, Twitter and many other apps, and not to mention your PC's browser too.
 - Once saved you can read them anytime even if you don't have an internet connection.
 - To read a football story I saved earlier I go to the Read it later app and there it is, ready in my reading list.
 - Even better, if I don't want to see the original page I can simply tap the 'T' and transform it into a very easy to read plain text view.
 - This is the way I read most stories on my phone as it's so much easier than scrolling through huge web pages.
 - The app saves the position of every page I read, so if I don't finish reading one, if I go back to it, it's still in the same place I left it.
 - Finally, to make sure you can find all of your saved pages; it's really easy to just swipe and tag a story. I tag all my football stories with 'footy'
-
- For anyone who likes Sudoku, Sudoku Grab is a great app.
 - Once downloaded, you can use your phones camera to grab any Sudoku puzzle from anywhere.
 - When in a puzzle, press the menu button and you can share with a friend via email.
 - You can complete puzzles, make different coloured notes or even use the hints button to fill it in for you!
 - You can grab as many puzzles as you want and the app has a handy tagging system so you can always remember where you grabbed them from.
 - When in a puzzle, press the menu button and you can share it with a friend through email.
 - Finally, when you're on the move you don't want to worry about saving your progress so the app auto saves your current puzzle whenever you exit it.
