

Ten steps to healthcare success

The future is exciting.
Ready?

- 1 Be smart about how your healthcare workers spend their time**
Deploy a dynamic calendaring system such as Microsoft Office 365 that can be accessed by your team – wherever they are – so they know where they need to be next.

- 2 Empower your team with the right data**
Give your team access to Electronic Patient Records. Enable them to access this data securely via smartphones and tablets enabled by Vodafone's Total Workforce Mobility solutions, so they can always have the right information to hand.

- 3 Rationalise your data storage**
Investigate cloud services such as Vodafone's Flexible Computing and Hybrid Cloud, taking advantage of data capacity on demand, which you can expand as and when you need to.

- 4 Make it easier to access services**
Improve access by investing in online appointment bookings, synced with Office 365.

- 5 Create personalised patient care plans**
Empower your patients by involving them in their own diagnosis and treatment. Deliver personalised care plans via email, on a secure website or using a mobile app.

- 6 Maintain contact with service users remotely**
Introduce video conferencing, calling chat function and photo sharing, and utilise existing technology such as phone calls, email and SMS.

7 Give independence back to your patients

Make it happen with remote patient monitoring, including wearable devices and M2M (Machine to Machine) sensors. You can keep track of a patient's vital functions, mood, medication intake, or even their location, and receive automated alerts should any potential issues arise.

8 Reduce your administrative burden

Use smarter data capture methods such as Office 365 and Vodafone's Total Workforce Mobility solutions on the move to reduce unnecessary paperwork and the risk of error. Explore the use of digital pens to record consultation notes.

9 Take security seriously

Make sure your devices are equipped with the necessary security precautions, like 1-click SIM deactivation and remote data-erase programmes.

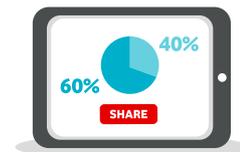

10 Consolidate and connect

Consolidate multiple IT systems and connect different locations to drive down your total cost of ownership with a Virtual Private Network (VPN).

Is your healthcare organisation Future Ready? Vodafone can get you there.

We can deliver total communication solutions and smarter ways of working, making your team more productive and better able to deliver the highest levels of care.

Talk to us about

How to define and implement effective communications and smarter working strategies, with expert advice and support to help you profile your existing organisation.

Total communications solutions to help you manage mobile devices and mobile working, as well as integrate mobile and fixed connections for your applications and data.

Innovative solutions to make healthcare delivery more efficient and service user-centred.

A range of unified communications and collaboration solutions that enable smarter working.

Consulting and software tools to keep your patient data secure on mobile devices.

A range of managed services to reduce administrative overheads and eliminate reliance on internal resources.

Expense management solutions.
