# Voice recognition and broadband accessibility

We're here to make your life simpler if you find it tricky to handle a computer.

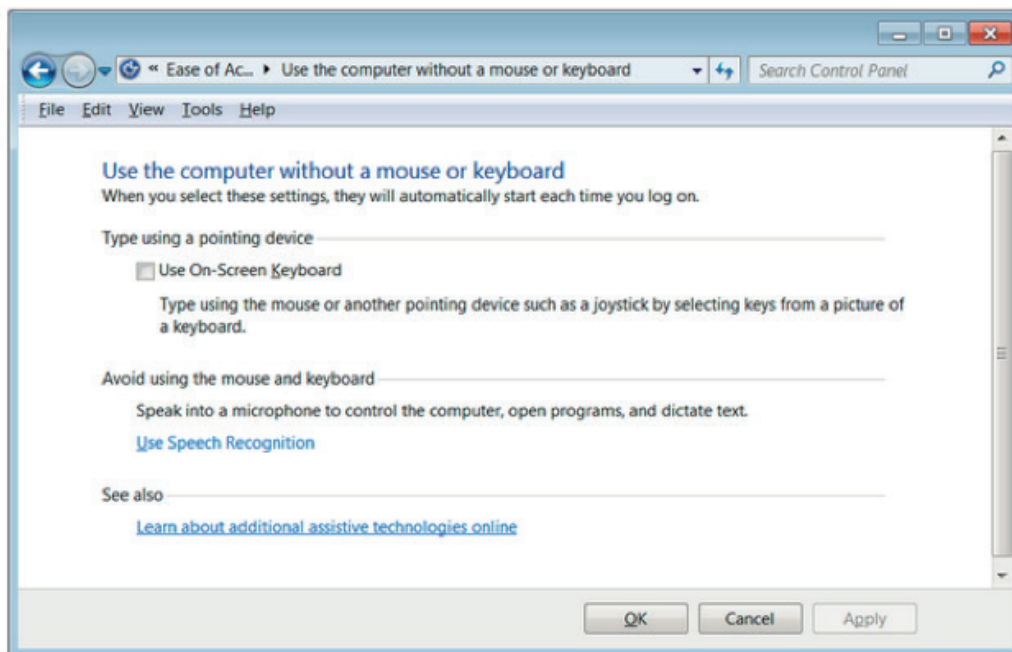

Voice recognition lets you give commands to your computer to open programs, dictate text, and carry out many other tasks — just by using your voice.

## Windows

Windows Speech Recognition (comes with Windows Vista, Windows 7, Windows 8 and Windows 10 but not Windows XP) lets you use your computer without a mouse or keyboard.

If you want to use this service:

- Click the Start button on the Windows key
- Type Ease of Access Center into the search box at the bottom left corner of the start menu and press Enter
- Choose Use the computer without a keyboard or mouse.

## Mac OS

Mac OSX Speakable lets you control your computer without a keyboard or mouse, but it doesn't support dictation into documents or programs.

To use Mac OSX Speakable on your computer:

- Click on the Apple icon and open System Preferences
- Choose Speech
